NUVI: Sequential Biorevitalization™ for sensitive and reactive skin

Developed for the treatment of sensitive or fragile skin, **NUVI** is a line formulated to combine high skin tolerance with effective regenerative action. The protocol's solutions work to restore skin balance, promoting cell turnover in complete safety.

The scientific rationale behind **NUVI** is based on formulas enriched with active ingredients that allow to:

MITIGATE HYPER-REACTIVITY:

by reducing tissue susceptibility to external stressors.

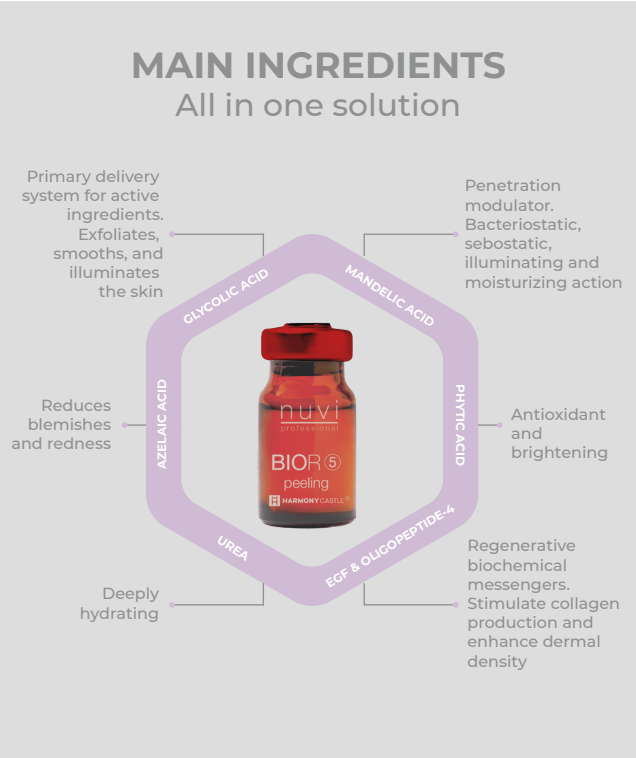

STRENGTHEN THE BARRIER FUNCTION:

by restoring the integrity of the hydrolipid film.

OPTIMIZE DEEP HYDRATION:

by counteracting transepidermal water loss and improving tissue quality.

NUVI: Sequential Biorevitalization™ for sensitive and reactive skin

BIOR⑤ PEELING cod.70269

A solution that combines the power of a glycolic, phytic, mandelic, and azelaic acid blend with the regenerating and revitalizing action of exclusive active ingredients, such as peptides, growth factors, organic silica, hyaluronic acid, rodacea extract, and polysaccharides.

Thanks to its unique composition, characterized by the synergistic dosing of acids and functional ingredients, it exfoliates and renews the skin while simultaneously stimulating tissue regeneration, restoring firmness, and ensuring optimal skin hydration.

BIOR⑤ BOOSTER cod.70270

It combats skin damage, particularly that related to the barrier function and the resulting loss of hydration.

The active ingredients in the formula — organic silica, hyaluronic acid, sulfur derivatives, urea, polysaccharides, growth factors, and rodacea extract — act in functional synergy to improve skin hydration and nourishment, replenishing the skin with essential elements.

The treatment helps improve skin tone, stimulate the endogenous production of collagen and elastin, and support the skin's natural reparative and regenerative processes.
