LIGHTEN: Sequential Biorevitalization™ for the treatment of hyperpigmentation.

LIGHTEN is an advanced product line, formulated for the treatment of imperfections linked to pigmentary hyper-reactivity and **indicated for managing dyschromia, melasma, chloasma, and post-acne scarring**. This protocol provides a targeted intervention for dull complexion and uneven skin texture, reducing pore visibility and smoothing the skin surface.

The formula utilizes a complex of high-performance active ingredients working in synergy to restore complexion uniformity:

MODULATION OF MELANOGENESIS:

thanks to active ingredients that target the irregular synthesis of melanin.

RENEWAL OF DERMAL VITALITY:

achieving a luminous, even, and firmer complexion

REGENERATING AND ANTIOXIDANT:

supports the endogenous production of collagen and elastin and combats oxidative stress

LIGHTEN: Sequential Biorevitalization™ for the treatment of hyperpigmentation.

MAIN INGREDIENTS
All in one solution

TRANEXAMIC PEEL cod.70283

A brightening solution formulated with tranexamic acid, ideal for targeting melasma, sun spots, and PAE (post-acne erythema). Thanks to a blend of alpha hydroxy acids (mandelic, glycolic, malic, and lactic), it ensures comprehensive exfoliation that smooths and evens out the complexion. Suitable for all skin types, it illuminates, firms, and refines skin texture through hydrating and antioxidant active ingredients such as ectoin, amino acids, and niacinamide.

Finally, the synergistic action of Hydrolyzed RNA/DNA (fractionated polynucleotides) and SH-Oligopeptide-1 (growth factor) stimulates collagen production, delivering a deep regenerating effect and visibly revitalized skin.

TRANEXAMIC COMPLEX cod.70280

A brightening, illuminating, and hydrating solution suitable for all skin types.

It contains tranexamic acid, highly effective against melasma, sun spots, and post-acne marks, combined with low-to-medium molecular weight hyaluronic acid for deep hydration. Niacinamide refines skin texture, reducing the appearance of enlarged pores, excess sebum, and discoloration, while an antioxidant blend combats oxidative damage and strengthens the skin barrier.

Finally, Hydrolyzed RNA/DNA (fractionated polynucleotides) and SH-Oligopeptide-1 (growth factor) stimulate collagen production, ensuring a deep regenerating effect for smoother, firmer, and visibly revitalized skin.
